

ALL IN AI Montréal 2026: Exploring AI and the Future of R&D Management

07/10/2026 4:31 pm IST

ALL IN AI Montréal 2026

ALL IN AI Montréal brings together companies, technology leaders and members of the wider artificial intelligence ecosystem to explore developments in AI and its application across industry.

The event provides an opportunity to hear from organisations working across the AI landscape, explore how the technology is changing the way people work and connect with members of Canada's technology and innovation community.

ReaDI-Watch attends ALL IN AI Montréal 2026

ReaDI-Watch attended ALL IN AI Montréal to showcase our work in R&D and innovation management, connect with organisations across the Canadian AI ecosystem and develop our understanding of the latest thinking around artificial intelligence.

One of the main takeaways from the event was the breadth of current thinking about AI and its role in the workplace. It also reinforced that our own use and understanding of AI continues to develop as the wider technology advances.

For ReaDI-Watch, this means continuing to strengthen our understanding of AI and cloud technologies alongside our existing expertise in R&D and innovation management.

AI has an increasingly important role to play in R&D management, particularly where it can help organisations capture, understand and manage R&D activity without creating additional work for the people carrying it out.

Attending ALL IN AI provided valuable insight into the wider development of AI and an opportunity to build new relationships within the Canadian ecosystem as ReaDI-Watch continues to develop its own application of AI within

R&D and innovation management.
